

ScholarsGallery — Business Plan

Confidential | Prepared for Angel Investor Review *Australian Investment Network — Proposal 1619143*

1. Executive Overview

ScholarsGallery is an Australian-focused iOS platform at the intersection of AI-powered professional training and digital art commerce. The company operates two distinct but complementary revenue streams under a single app:

1. **Aged Care Monitor** — an on-device AI coaching platform for Australia's 366,000+ aged care workers, delivering trauma-aware communication training, dementia-dignity curriculum, and personalised flashcard learning
2. **Creative Studio & Gallery** — an AI image generation studio and curated digital art marketplace for collectors and creative professionals

The app is built natively on Apple's latest frameworks (Foundation Models, StoreKit 2, CloudKit, SwiftData), available on iOS, and distributed through the App Store with a subscription and à la carte commerce model.

We are seeking **seed investment** to accelerate go-to-market in the Australian aged care sector, expand curriculum content, and fund App Store launch marketing.

2. Problem Statement

Aged Care Workforce Crisis

Australia's aged care sector faces a chronic workforce quality and retention problem. The 2021 Royal Commission into Aged Care Quality and Safety found:

- Over **60% of residential care workers** have received no formal dementia-specific training
- Trauma-informed and dignity-centred communication is consistently identified as a skills gap
- Existing training solutions are **web-based, session-locked, and expensive** (AUD \$400–\$1,200 per worker per year), making ongoing micro-learning practically inaccessible on the floor

Creative Professional Market Gap

AI image generation tools (Midjourney, Stable Diffusion) are powerful but divorced from scholarly context, art history, and curated collections. There is no premium iOS-native platform that bridges AI creativity with genuine intellectual and collectible depth.

3. Solution

ScholarsGallery delivers training and creativity as a single coherent iOS experience:

Feature	Value Delivered
Aged Care Monitor	On-device AI flashcards, lesson plans, and study coach for trauma-aware care — works offline, no corporate LMS required
Study Coach	Apple Intelligence–powered tutoring that adapts to a worker's last topic and role
Exhibitions & Essays	Curated scholarship essays tied to artworks — continuing education with academic rigour
Creative Studio + Dola	AI prompt refinement + image generation for professionals and collectors
Collection & Editions	Owned digital art with CloudKit-backed provenance tracking
Admin Panel	Operator-level controls for care facility managers or studio operators

4. Market Opportunity

Aged Care Training (Primary TAM)

Metric	Value
Australian aged care workforce	~366,000 workers (AIHW 2023)
Facilities (residential + home care)	~2,700+ approved providers
Addressable workers (residential)	~230,000
Target penetration Year 3	2% of residential workforce
Implied subscribers at 2%	~4,600
ARPU (Monitor Monthly AUD \$14.99)	~AUD \$828,000 ARR

Creative Studio / Collector Market (Secondary TAM)

- Australia has ~1.2M active art market participants (Arts Council 2022)
- AI creative tools subscription market: USD \$1.4B globally (2024), growing 38% CAGR
- Target 0.1% penetration = 1,200 Studio subscribers

5. Product & Technology

Architecture

- **Platform:** iOS 18+ (iPhone, iPad)
- **AI:** Apple Foundation Models (on-device, no cloud cost for inference)
- **Backend:** Vapor (Swift) server on custom domain `api.scholarsgallery.app`
- **Data sync:** CloudKit (iCloud) — zero additional database cost for users
- **Payments:** StoreKit 2 — Apple-managed subscriptions and in-app purchases
- **Distribution:** App Store (global) with TestFlight beta pipeline

IP Moats

1. **On-device AI inference** — training content is private, secure, and works offline — critical differentiator for care floor environments where devices may be in airplane mode
2. **Curriculum depth** — trauma-aware, dementia-specific content developed with aged care clinical input
3. **Scholarship integration** — unique positioning linking art history and care philosophy
4. **Operator tooling** — admin access grant system enables B2B2C facility-level deployment

Development Status

- App in **TestFlight beta** with full CI/CD pipeline (GitHub Actions → TestFlight)
 - 47 unit tests + full UI test suite passing
 - CloudKit sync, StoreKit subscriptions, and admin panel fully implemented
 - Production API server live at `api.scholarsgallery.app`
-

6. Business Model

Revenue Streams

Stream	Product	Price (AUD)	Billing
Monitor subscription	<code>gallery.monitor.monthly</code>	~\$14.99/mo	Monthly recurring
Monitor subscription	<code>gallery.monitor.yearly</code>	~\$119.99/yr	Annual recurring

Stream	Product	Price (AUD)	Billing
Studio subscription	gallery.studio.monthly	~\$19.99/mo	Monthly recurring
Studio subscription	gallery.studio.yearly	~\$159.99/yr	Annual recurring
Generation credits	gallery.studio.generation.pack	~\$4.99 pack	One-time IAP
Digital art editions	Marketplace checkout	Variable	One-time sale

Unit Economics (Monitor, Monthly Sub)

- ARPU: AUD \$14.99/mo
- App Store net (after 30% → 15% for small dev): ~AUD \$12.74/mo per sub
- Estimated CAC (App Store organic + aged care referral): AUD \$35–60
- Payback period: 3–5 months
- Estimated LTV (12-month retention): AUD \$153/user

7. Go-to-Market Strategy

Phase 1 — App Store Launch (Months 1–3)

- TestFlight → App Store public launch
- Content seeding: 3 full Monitor curriculum units (dementia, trauma, co-design)
- Referral program through aged care professional networks (LinkedIn, ACSA, LASA)
- PR in sector publications (*Australian Ageing Agenda*, *Aged Care Insite*)

Phase 2 — Facility Partnerships (Months 4–9)

- Direct outreach to top 50 residential aged care providers by bed count
- Offer facility-level admin panel with usage analytics
- Pilot program: 3-month free access for 1 facility (50–100 workers) → convert to group licensing
- Target: 5 pilot facilities × 80 workers avg = 400 active subscribers

Phase 3 — B2B Licensing (Month 10+)

- Volume licensing for facilities (e.g., AUD \$8/worker/month for 50+ seats)
- Integration with facility rostering/LMS systems via API
- Expand to New Zealand, UK aged care markets (same English-language content)

8. Competitive Landscape

Competitor	Type	Weakness vs ScholarsGallery
Altura Learning	Web LMS, aged care	Session-locked, no AI, no offline, high cost
HelpingMinds / CarePath	Care workflow apps	No training content
Midjourney / DALL-E	AI image tools	No care content, no iOS-native, no scholarship layer
Dementia Australia eLearning	Free, government	No personalisation, no flashcards, no ongoing engagement
Generic mLearning platforms	Broad eLearning	Not aged-care specific, no on-device AI

Key differentiator: ScholarsGallery is the only platform combining on-device AI coaching, dementia/trauma-specific curriculum, and digital art scholarship in a single polished iOS app.

9. Team

Role	Responsibility
Founder / CEO	Product vision, iOS development, clinical curriculum direction
(Hiring) Head of Care Content	Curriculum development, clinical validation, ACSA partnerships
(Hiring) Growth / Partnerships	Aged care facility sales, App Store ASO, content marketing

The founding team brings deep iOS platform expertise (Xcode 26, SwiftUI, Foundation Models) and a clear understanding of the aged care workforce challenge.

10. Financial Summary

(See accompanying Financials document for full 3-year model)

Metric	Year 1	Year 2	Year 3
Total Subscribers	320	1,850	5,100
ARR (AUD)	\$58,000	\$342,000	\$940,000
Gross Revenue	\$68,000	\$398,000	\$1,080,000
Net Revenue (post App Store)	\$57,800	\$338,300	\$918,000

Metric	Year 1	Year 2	Year 3
Operating Expenses	\$185,000	\$310,000	\$490,000
EBITDA	(\$127,200)	\$28,300	\$428,000
Cumulative Cash Position	(\$127,200)	(\$98,900)	\$329,100

Break-even: Mid Year 2 (~Month 20) **Investment sought:** AUD \$250,000 seed round **Use of funds:** 60% product & content (curriculum, AI), 25% marketing & partnerships, 15% operations

11. Investment Opportunity

Raise: AUD \$250,000 **Structure:** SAFE note or convertible equity at AUD \$2.5M cap **Use of Funds:**

Category	Amount	Purpose
Curriculum & content	\$95,000	3 additional Monitor modules, clinical review
Marketing & ASO	\$62,500	App Store optimisation, sector PR, influencer pilots
Facility partnerships	\$37,500	Pilot program delivery, enterprise sales
Operations & infrastructure	\$37,500	API scaling, server costs, legal
Working capital reserve	\$17,500	Buffer

Return scenario (3-year exit): - Strategic acquisition by Altura Learning, Medibank, or BUPA aged care division - Comparable SaaS exit multiples: 4–6× ARR - At AUD \$940,000 ARR Year 3 → implied valuation AUD \$3.8M–\$5.6M - Investor return on \$250K seed at \$2.5M cap: **1.5x–2.2x at Year 3 exit**

12. Risk Factors & Mitigations

Risk	Mitigation
App Store review delays	TestFlight pipeline live; CI/CD auto-deployment reduces iteration cycle
Low aged care worker smartphone penetration	iPad-compatible; facility-provided devices becoming standard post-Royal Commission
Apple Foundation Models availability	Fallback to cloud inference (Dola API) already built into architecture
Competition from free government tools	Premium positioning; AI personalisation unavailable in free tools

Risk	Mitigation
Key person dependency	Documented codebase, CI pipeline, hiring plan for content lead

13. Appendices

- A: App screenshots and feature walkthrough (*available on request*)
 - B: TestFlight beta link (*available to accredited investors under NDA*)
 - C: 3-Year Financial Model (*see Financials document*)
 - D: Pitch Deck (*see Pitch Deck document*)
