

ScholarsGallery — Executive Summary

Seed Round | AUD \$250,000 Australian Investment Network — Proposal 1619143

The Opportunity

ScholarsGallery is an iOS platform delivering AI-powered training to Australia's 366,000 aged care workers — a workforce the 2021 Royal Commission found to be chronically undertrained in the very skills that prevent abuse, neglect, and poor outcomes: trauma-aware communication, dignity-centred dementia care, and family co-design.

Existing training solutions cost AUD \$400–\$1,200 per worker per year, require desktop access, and see completion rates below 30%. ScholarsGallery solves this with a subscription app at AUD \$14.99/month that runs entirely on iPhone, works offline, and uses Apple's on-device AI to personalise each learning session in real time.

A second revenue stream — a Creative Studio for AI image generation and curated digital art — complements the training product and expands the addressable market to creative professionals and art collectors.

Product

The app is built, tested, and live on Apple TestFlight. Core capabilities include:

- **Aged Care Monitor:** Flashcards, lesson plans, and AI Study Coach for dementia and trauma-aware care training — covering three full curriculum modules developed against Royal Commission recommendations
 - **Study Coach:** Apple Foundation Models powers an on-device tutor that remembers each worker's last topic and adapts content to their role
 - **Creative Studio:** AI image generation with "Dola" smart prompt assistant, curated exhibition galleries, and a digital art marketplace
 - **Admin Panel:** Facility-level operator controls for B2B deployment without enterprise IT overhead
 - **Full CI/CD pipeline:** GitHub Actions → TestFlight with 47 automated tests passing; App Store launch-ready
-

Market

Australia's residential aged care workforce represents approximately 230,000 workers across 2,700+ approved providers — a mandatory training market being reshaped by post-Royal Commission government reforms. Capturing 2% of this segment (4,600 subscribers) at AUD \$14.99/month generates AUD \$828,000 ARR from Monitor alone.

The Creative Studio addresses Australia's 1.2M+ active art market participants and the global AI creative tools market, currently worth USD \$1.4B and growing at 38% CAGR.

Business Model

Revenue is subscription-based via the App Store. Apple handles billing, renewals, and fraud; ScholarsGallery retains 85% of revenue under Apple's Small Business Program. Unit economics are strong: Monitor LTV of AUD \$153 against a CAC of AUD \$45 (3.4× at Year 1, improving to 5.5× by Year 3 as facility partnerships reduce CAC).

Financial Summary

Metric	Year 1	Year 2	Year 3
Active Subscribers	484	1,665	3,266
Net Revenue	AUD \$70,228	AUD \$248,546	AUD \$532,403
EBITDA	(AUD \$131,021)	(AUD \$68,854)	AUD \$105,603
Cash Position (EOY)	AUD \$118,979	AUD \$50,125	AUD \$155,728

Break-even occurs in approximately Month 26 under the base case.

The Ask

ScholarsGallery is raising **AUD \$250,000** as a SAFE note at a **AUD \$2.5M post-money valuation cap**. Proceeds fund three priorities: expanding the curriculum to five full modules with clinical review (AUD \$95,000), a structured App Store launch campaign and sector PR (AUD \$62,500), and direct business development with Australia's top aged care providers (AUD \$37,500).

Why Now

Three forces create a rare timing window. First, post-Royal Commission regulatory pressure means aged care providers are actively seeking compliant, scalable training solutions today. Second, Apple Foundation Models (released in iOS 18, 2024) makes on-device AI personalisation possible for the first time — first movers will own the

category. Third, no existing app combines AI, offline capability, clinical-grade dementia curriculum, and a native iOS experience. ScholarsGallery is built, tested, and ready to capture this gap before it closes.

Investment Thesis

An investor at AUD \$250,000 on a \$2.5M cap participates in a company with: - A working product and live technical infrastructure - A regulatory-driven, recession-resistant market (aged care training is legally mandated) - 85% gross margin, Apple-managed billing, and zero cloud inference cost (on-device AI) - A clear path to strategic acquisition by Altura Learning, Medibank, BUPA, or a PE-backed aged care roll-up at 5–8× ARR

At base case Year 3 ARR of AUD \$532,000 and a 5× multiple, the implied exit valuation is AUD \$2.66M — returning approximately 1.1× on seed capital. The bull case (three facility deals in Year 2) produces AUD \$1.14M ARR and a potential AUD \$5.7M–\$9.1M exit, returning 2.3–3.6× on seed capital.
